The Japanese Examiner states grounds for rejection of the corresponding Japanese application in the Notice of Grounds for Rejection as follows:

GROUND S

1. A patent shall not be granted for an invention according to the following claims of this application to provision of Section 29 (2) of the Patent Law since the invention could easily have been made, prior to the filing of the patent application, by a person with ordinary skill in the art to which the invention pertains, on the basis of inventions which were described in a distributed publication or made available to the public through electric telecommunication lines in Japan or elsewhere prior to the filing of the patent application.

2. This application does not fulfill the requirements provided in Section 36 (6), (ii) of the Patent Law in the following aspects.

Note (please refer to List of Cited Documents, etc. regarding cited documents, etc.)

Ground 1

- Claims 1-4
- Cited references 1, 2
- Notes:

In the cited reference 1 (see paragraphs [0032]; [0033]), it is described to control a current of a servomotor so that the pressing force becomes a predetermined pressing force in a welding gun driven by the servomotor.

In the cited reference 2 (see page 2, left column, lines 2-9), it is described to control a torque of a motor by monitoring a temperature of the motor and correcting the current in accordance with the temperature.

In the welding gun of the cited reference 1, it is obvious that the pressing force is dependent on a torque of the motor and to adjust the pressing force by controlling the torque, for a person with ordinary skill in the art.

Thus, it can be achieved by a person with ordinary skill in the art to adopt the motor torque control means described in the cited reference 2, in the structure of the cited reference 1 to make the pressing force be a predetermined value.
